04 - Test Record Creation

Created sample records with different branch values.

Work Completed

• Opened the Institution Details table.

• Created multiple records.

• Used different Branch values: ECE, EEE and CSE.

• Included EEE records so the READ ACL can be tested.

• The different branch values make it possible to verify record-level filtering.

GitHub Documentation Note

Expected READ behavior: the EEE user should only be able to view EEE branch records.
